

Censorship is terrible in a country which is supposed to have free speech. I feel because XM radio chooses to have non-censored programming and all political beliefs showcased in their programming they are being singled out for attack. The National Association of Broadcasters have become saturated with a Republican right-wing agenda in the last 3 years. It is really scary what our country has become. I pay for satellite radio and it's worth every penny and XM should be able to have traffic and weather reports. They let cable and satellite TV broadcast anything they want to so why not satellite radio?
